

# UNIVERSITY OF CENTRAL PUNJAB

**FALL-2023**

**Course Title: Advance business analytics**

**Course Code: BMK7183**

## **Assignment No. 1**

Course Instructor: Noman Yaqoob		
Section: M1	Program: MBA	Date: 20/11/23
Submission Date: 26/11/23	Maximum Marks:	
Program Objective:	Course Objective:	Course Learning Objective:
<b>TO BE FILLED IN BY THE STUDENT</b>		
Student Name: Fahad Ubaid	Registration No: L1f21mbam0167	Sr. No:

## **Assignment 1**

**Comparison of tweet data with stock prices of Nvidia and analyse either the tweets have influence over stock prices?**

## 1. Step 1 - Nvidia tweets text sentiment analysis:

Sentiment	Score	Sentiment	Score	Sentiment	Score	Sentiment	Score
positive	0.69951	neutral	0.52009	negative	0.430048	neutral	0.542804
positive	0.657974	positive	0.668941	positive	0.6611	positive	0.786241
neutral	0.58518	positive	0.613157	neutral	0.475219	positive	0.647489

Stock graph for NVDA:

## **Comparison and analysis of tweet data with stock of NVDA:**

Initially, data encompassing tweets from the last 9 days underwent sentiment analysis to gauge text sentiment. A subsequent line chart visualized these sentiments, highlighting that nearly 60% retained a neutral stance, 30% conveyed positivity, and 10% veered toward negativity.

Regarding the stock analysis, corresponding data for NVDA's stock during those same dates was collected, forming a stock graph. This graphical representation predominantly depicted closing prices lower than the opening prices, symbolized by white candles. Specifically, on 30-01-2023, the stock's closing price fell below its opening price, indicating a predominantly bullish trend with a singular bearish shift.

## **Analysis of both data and findings:**

1. When people were unsure about Nvidia for a few days (neutrality in tweets), the stock usually started high but then dropped if there wasn't any positive reaction. So, if the tweets stayed neutral for a while (like three days), chances were the stock might go down. If the tweets stay neutral for a long time, it's hard to predict if the stock will go up.
2. When folks were feeling positive (like on 3-02-2023), the stock prices were low because maybe they were still waiting. But when the positivity came back on 6-02-2023, the stock started going up, even with a lower starting price. So, positive tweets after being negative or neutral often meant the stock might start going up.

3. On days when people were negative (like on 04-02-2023), it usually made the stock prices drop, especially on a day when the stock market was closed. When it reopened, the starting price was lower than the closing price before, showing that negative tweets can bring down NVDA's stock prices
